

The graph illustrates the temporal dynamics of the 'L' metric. Key observations include:

- Initial Growth (1970-1980):** The metric starts at a low value of approximately 10 and shows a steady increase to about 30 by 1980.
- Major Peak (1990):** A significant surge occurs, with the metric reaching its highest point of nearly 100 around 1990.
- Post-Peak Decline (1990-2000):** Following the peak, there is a sharp and rapid decline, with the metric falling to approximately 20 by 2000.
- Stability and Fluctuation (2000-2010):** The metric remains relatively stable, fluctuating between 20 and 40 for a decade.
- Sharp Drop (2010-2015):** A dramatic decrease is observed, with the metric plunging to its lowest recorded value of approximately 5 around 2015.
- Recovery (2015-2020):** The metric shows a slight recovery, rising back to approximately 20 by 2020.

The graph is annotated with numerous labels in green text, indicating specific values or trends at various points along the timeline. These labels include values such as 10, 20, 30, 40, 50, 60, 70, 80, 90, and 100, as well as specific years and time intervals.
